

Save time with the **LÄSSER CUBE** automatic shuttle station. With the new improved design, it is even easier to prepare your shuttles.

Everything happens in one place and all the important assets are easy to reach. This smooth and quiet companion is the perfect extension for your efficient production.

There is no need to worry about shuttles anymore – the **LÄSSER CUBE** does it all for you. It is very easy to use since the controls are very user-friendly. Everything works completely automatically. In addition to that it is possible to set unit number as well as thread tension.

To keep the shuttles in perfect condition, the preparation process is divided into three steps. This ensures maximum performance and reliability.

CLEAN, LOAD AND ADJUST

Step 1

The shuttles are opened and cleansed of any residues. In order to prevent damage to the shuttles it is done so with the force of vacuum.

Step 2

Bobbins are identified and placed precisely within the shuttles. The bobbin threads are cut accordingly.

Step 3

Thread tension is adjusted while the shuttles are monitored by a high-precision sensor.

IN ONE SINGLE PROCESS
