

Double sequin application

For unlimited creativity and shiny designs

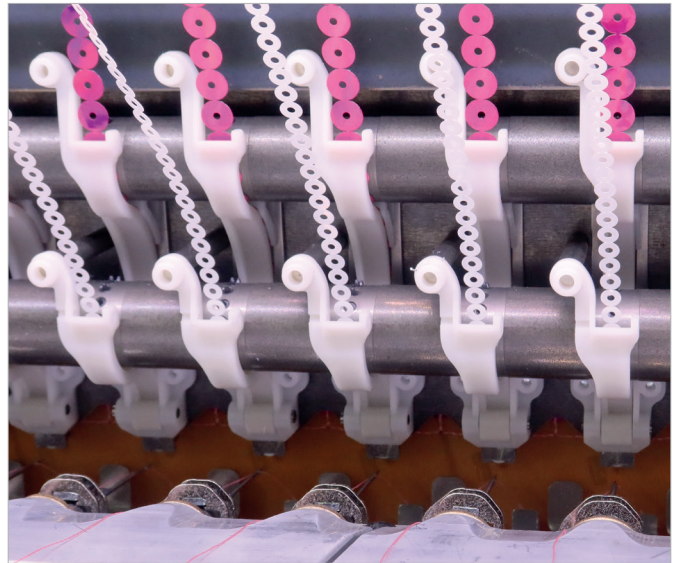

The application features precision at the highest production speed.

The two-shaft drive concept makes it possible to process two sequin sizes at one embroidery position simultaneously.

Optimally arranged, the application is quick and very easy to operate.

High productivity

The two separately driven shafts position each sequin for embroidery in a fraction of a second. This enables the system to achieve an extremely high application rate at speeds of up to 600 rpm. Full-surface designs can be produced extremely quickly from a repeat of 4/4.

Double sequin application 8/4

Precise positioning

The individually driven sequin shafts enable constant precision across the entire length of the machine. The two drive shafts can be individually referenced via the touch panel to adjust them in the hundredths range. The exact guidance of the sequin tape makes it possible to position the sequins with high accuracy.

Sequin selection

Sequin sizes of 7/7 mm, 5/7 mm, 4/7 mm, 5/5 mm, 4/5 mm, 4/4 mm, 3/5 mm, 3/4 mm can be combined.

Other combinations available on request

Your benefits at a glance:

- Production speed of up to 600 rpm.
- Simultaneous processing of two different sequin sizes at the same embroidery position
- Precision over the entire embroidery length due to electronic control
- The repeat can be freely selected, starting from 4/4.
- The application can be equipped with different sequin diameters.
- Convenient operation
- Easy and fast threading of the sequin tapes
- Punching possible with Willcom and EmStudio V7
- Easy cleaning due to good arrangement of the sequin application
